

## PHP Code

```
class Airplane  
{  
    var $model;  
}
```

```
$thePlane = new Airplane();  
$thePlane->model = "Boeing  
737";
```

```
print "The plane being used for  
this flight is a ";  
print $thePlane->model;
```

## PHP Server's Memory

\$thePlane is created as an object  
of class (type) Airplane.

The \$model property is assigned  
the value "Boeing 737".

## HTML Page's Display

The plane being used for this  
flight is a Boeing 737
